

The IMA Journal of Mathematics Applied in Business and Industry examines mathematical modelling of plant processes, operations and organisations as well as mathematical techniques of use in marketing, finance, production and strategy. Advances in theory relating to such problems and case studies that involve substantive mathematical analysis, are particular features of the journal. Research work in such fields as applied mathematics, operational research, engineering mathematics and mathematical economics is included, provided it addresses problems in business and industry. A primary aim of the journal lies in bridging the gap between the theory of mathematical-based disciplines and the practical problems faced in business and industry.

Editors: Professor R. C. H. Cheng, Canterbury Business School, University of Kent at Canterbury, Canterbury, Kent CT2 7PE; Professor S. McKee, Department of Mathematics, University of Strathclyde, Livingstone Tower, 26 Richmond Street, Glasgow G1 1XH.

Books for review should be sent to: Journals Production Department, Oxford University Press, Great Clarendon Street, Oxford OX2 6DP.

INSTRUCTIONS TO AUTHORS

1. *Submission of manuscripts.* Three copies of each manuscript should be sent to one of the Editors, together with the originals and two photocopies of any illustrations. Only the originals of illustrations will be returned to authors if a paper is not accepted for publication.

The Editors will correspond directly with the authors on the acceptability of their papers, and if the Editors deem a submitted paper to be a specialized contribution more appropriate for publication in one of the other IMA journals, they will forward it to the Editors of that journal for consideration.

Authors may not submit manuscripts that are under consideration for publication elsewhere.

2. *Manuscript layout.* Manuscripts should be typewritten on one side only on high quality paper using double spacing throughout. Each page of the manuscript should be numbered. The front page should contain the article title, author's name and affiliation, and a summary. The summary should not exceed 300 words and should be intelligible to general readers without recourse to the main text. Authors should provide up to six keywords. Footnotes and a list of notations should be avoided.

Articles should, in general, begin with an introduction which adequately covers the literature and scope of the paper. Each section in the paper should be numbered and each equation number should be related to its own section. Each article should have, in general, a conclusion or discussion section. Any appendices should precede the Reference section.

Equations should be typed wherever possible and punctuated to conform to their place in the syntax of the sentence.

The SI system of units should be used in all papers.

3. *Illustrations and tables.* Drawings should be in indian ink on white card, faintly blue- or green-lined graph paper or on tracing cloth or paper. Authors should letter their drawings neatly with capital and lower case lettering. In general it is unnecessary to supply diagrams more than twice the linear dimensions desired in the final reproduction. *Please note: it is most that lines and symbols should be drawn boldly enough to bear reducing to the desired size.* Redrawing of submitted diagrams will delay publication. A list of captions and titles should be typed at the end of the manuscript.

4. *References.* References should preferably be indicated in the text by the Harvard system, citing the authors' names and date of publication. References should be listed at the end of the manuscript in alphabetical order of first-cited names. References by the same author should be in chronological order. The normal form of listed reference is author's surname, initials, years of full publication, article title, journal name (abbreviated in accordance with the World List of Scientific Periodicals 4th Edition), volume number (underlined), inclusive page numbers.

5. *Copyright/offprints.* It is a condition of publication in the journal that authors assign copyright to Oxford University Press. This ensures that requests from third parties to reproduce articles are handled efficiently and consistently and will also allow the article to be as widely disseminated as possible. In assigning copyright, authors may use their own material in publications provided that the journal is acknowledged as the original place of publication, and Oxford University Press is notified in writing and in advance. In consideration for assignment of copyright, the publisher will supply 50 offprints without covers of each paper. Further offprints may be ordered at extra cost at the proof stage.

CONTENTS

- 89 J. CHENG, Y. DAVYDOVA, P. HOWLETT and P. PUDNEY
Optimal driving strategies for a train journey with non-zero track gradient and speed limits
- 117 P. LORY
Short-cut distillation columns based on orthogonal polynomials of a discrete variable
- 127 T. DOHI, H. OKAMURA and S. OSAKI
Optimal order-limit policies for an (r, Q) inventory system
- 147 R. M. HILL
Bayesian decision-making in inventory modelling
- 165 R. M. HILL
Production planning towards the end of a product life cycle
